

FEDERAL ELECTION COMMISSION
WASHINGTON, D.C. 20461

RQ-2

Marvin S. Shapiro, Treasurer
Citizens Organized Political Action
Committee
1800 Avenue of the Stars #900
Los Angeles, CA 90067

DEC 6 2000

Identification Number: C00110585

Reference: September Monthly Report (8/1/00-8/31/00)

Dear Mr. Shapiro:

This letter is prompted by the Commission's preliminary review of the report(s) referenced above. The review raised questions concerning certain information contained in the report(s). An itemization follows:

-Please amend Schedule B supporting Line 23 by providing the office sought (House or Senate) for each contribution made. 11 CFR §104.3(b)(3)(ii) and (v)

A written response or an amendment to your original report(s) correcting the above problem(s) should be filed with the Federal Election Commission within fifteen (15) days of the date of this letter. If you need assistance, please feel free to contact me on our toll-free number, (800) 424-9530 (at the prompt press 1, then press 2 to reach the Reports Analysis Division). My local number is (202) 694-1130.

Sincerely,

Antoinette Kitchen
Reports Analyst
Reports Analysis Division

The first part of the paper discusses the importance of understanding the cultural context of the research. It highlights the need for researchers to be sensitive to the values and beliefs of the communities they are studying. This is particularly important in the field of health research, where cultural differences can significantly impact the effectiveness of interventions. The author argues that a one-size-fits-all approach is not only ineffective but also potentially harmful. Instead, researchers should strive to understand the unique cultural perspectives of each community and tailor their research accordingly.

The second part of the paper explores the challenges of conducting research in culturally diverse settings. It discusses the difficulties of recruiting participants, obtaining informed consent, and ensuring the ethical integrity of the study. The author provides several examples of how these challenges have been addressed in practice, drawing on the experiences of researchers from various cultural backgrounds. These examples illustrate the importance of building trust and rapport with the community, as well as the need for ongoing communication and collaboration throughout the research process.

The third part of the paper focuses on the role of the researcher in promoting cultural understanding and respect. It discusses the importance of being a cultural learner, rather than a cultural expert. This means that researchers should approach their work with a humble and open-minded attitude, willing to learn from the community they are studying. The author emphasizes the need for researchers to be transparent about their own biases and assumptions, and to actively seek out and address any potential conflicts of interest. By doing so, researchers can ensure that their research is both culturally sensitive and scientifically rigorous.

In conclusion, the paper argues that a culturally sensitive approach to research is essential for understanding the health needs of diverse populations. It calls for a shift in the way we think about research, from a focus on individual differences to a focus on community-level factors. This shift requires a commitment to ongoing learning and collaboration, as well as a willingness to challenge our own assumptions and biases. By adopting a culturally sensitive approach, researchers can ensure that their research is both relevant and effective, and that it contributes to the health and well-being of all communities.
